EDUCATION

Vellore Institute of Technology, Bhopal

B.Tech in Computer Science — 8.94 CGPA

Bhopal, IN

Aug 2023 – May 2027

Delhi Public School

CBSE Class 12th — 87%

Lucknow, IN

2022 – 2023

Delhi Public School

CbsE Class 10th — 90%

Lucknow, IN

2020 – 2021

EXPERIENCE

Member — Vitronix Club, VIT Bhopal

2024 – Present

VIT Bhopal

- Led promotions and communication strategy through targeted social media campaigns, visual branding, and coordinated outreach, improving event visibility and participation.
- Designed promotional content, managed social media communication, and supported branding for technical workshops and events.
- Coordinated speakers and logistics for 200+ students; collected feedback to improve events.

PROJECTS

IoT Air Quality Monitoring System

ESP8266, DHT11, MQ135, Embedded C, IoT Cloud

- Developed an IoT-based environmental monitoring system measuring temperature, humidity, and air quality levels.
- Integrated ESP8266 with DHT11 and MQ135 sensors to stream real-time data to a cloud dashboard.
- Enabled remote monitoring and alerts for unsafe air conditions, improving awareness of indoor pollution levels.

AI-Based Skin Disease Detection System

Python, TensorFlow/Keras, OpenCV, Deep Learning

- Built a deep learning model to detect skin diseases from uploaded images with automated classification.
- Implemented preprocessing, feature extraction, and CNN-based training pipeline to improve diagnostic accuracy.
- Designed an inference interface allowing users to upload images and receive instant predictions.

Kiddle — Child-Safe Web Browser

Python, Flask, Web Filtering, UI Design

- Developed a web-based child-safe browser implementing filtered search, controlled routing, and simplified interface design.
- Built backend logic to restrict unsafe content and prioritize educational results using rule-based filtering.

TECHNICAL SKILLS

AI/ML/DL: PyTorch, Transformers, CNN Models, Image Classification

Python Libraries/Frameworks: TensorFlow/Keras, OpenCV, Pandas, NumPy, Flask

Web: React.js, Vite, Express, Node.js, Vue.js, Bootstrap, Tailwind

Cloud: AWS, Docker, Kubernetes

Databases: MongoDB, PostgreSQL, MySQL,

Languages: Java, HTML, CSS, JavaScript, Python, SQL,

ACHIEVEMENTS

Ranked in top 1% of class in java programming, python programming, and mathematics coursework.

Developed multiple academic and practical projects including an AI-based skin disease detection model and IoT environmental monitoring system.

Implemented parallel computing programs using MPI, demonstrating understanding of distributed processing and synchronization concepts.

Solved advanced algorithmic problems including graph colouring, N-Queens, convex hull, and string matching techniques.
